Accessories are other items that may be required to complete the installation, or items that can help in the functionality of any given application. The filter is lower by the pump category you are looking for and this will help to sort out the more focused approach. (Click on THE PAGE MENU item to see specific YOKE SHOP products; scroll down the page to see all the PAGE MENU KVIK SHOP PRODUCTS.) If you have a Wayne Sump pump, you know how long it lasts without problems. Eventually the float switch will fail; however, this does not mean that you have to give up the pump. Home and engine, no doubt years of service left. So why not buy and install a replacement float switch? To help you be prepared to give up parts of the sump pump, we're including all wayne sump pump spare parts here for a quick purchase. Keep the replacement switch handy just in case your sump pump switch fails during a heavy downpour. Buying and replacing the float top with a brand new build is very simple. Spare parts are available on Amazon (we have links below for you) and we've included a video to show you how it's done. You don't need to be a plumber to make a switch replacement. The two most common parts that need to be repeated at Wayne's ironing pump are the switch and float. Wayne Water Systems has made it easy to buy and replace both. Being a plumber is not required to purchase or install parts of Part 60017-001 identified as Top Float and Switch Replacement Kit. It contains a switch, and an attached power cord that fits between the pump body and the head float. Wayne recommends replacing the switch every 2 to 4 years, depending on how often the pump works. No sump pump switch lasts forever; So it's a great idea to have an extra on hand, so when the switch fails during a heavy downpour you are ready. Part number 56395 replaces only the switch. This takes care of the part Wayne Water Systems recommends to be replaced every 2 - 4 years. 3 Options for replacing the switch exist. We are looking at options that provide advantages and disadvantages. Conclusion is the best option and why it is the best option. Here are 3 Options Comparison PART NUMBER: 56395 For CDU, SPT and SSPF ADVANTAGE models: The cost is 75% less than buying the entire Upper Cap Build OF THE BOOZE: Installation is not as easy, since the switch wires must be unattached and new wires attached to THE ANSWER: Buying Part Number 56395 for \$20 at the time of writing makes sense if you are confident in your DIY skills. Buy Link Part 56385 PART NUMBER: 60017-0001 For CDU, SPT and SSPF models includes switch, attached cord, pad, Float Guard, Arm ADVANTAGE switch: DIYer can install the top case very easily. No wires to connect and Connection. DISADVANTAGE: It costs four times more than just a switch for \$20. A: Buying 60017-001 makes sense if you're not sure if you can make a replacement yourself. Buy Link Part 60017-001 PART PART HC6000 and HC8000 for any ADVANTAGE model: 1) This option eliminates the need to remove the sump pump from the pit when replacing the switch. 2) The controller of the switch HC6000 and HC8000 will last many years because it uses a controller that receives signals from probes affected by water pressure. The HC series controller and probes have no moving parts; No need to remove the pump from the pit to replace the sensors that replace the need for a float and the dependence on the float to complete the cycle to allow the switch to activate the pump. 3) HC6000 and HC8000 are easy to install. Simply link Wayne's float switch to the 'ON' position. Then place the HC probes on the discharge pipe: Connect the HC switch to the socket. then plug Wayne's engine cord into the HC switch. Learn more about HC6000 and HC8000 Electronic Sump Pump. RELATED: 1) This switch is a new concept, but we installed it in 2011. It still works perfectly. We strongly recommend it. 2) Worth more than just buying a 56,395 replacement switch. 3) HC6000 and HC8000 are easy to install. Simply link Wayne's float switch to the 'ON' position. Then place the HC probes on the discharge pipe; Connect the HC switch to the socket. then plug Wayne's engine cord into the HC switch. Learn more about HC6000 and HC8000 Electronic Sump Pump. A: Buying 60017-001 makes sense if you're not sure if you can make a replacement yourself. Buy Link HC6000 Buy Link HC8000 Our recommendation is based on your skill, level of trust and availability of time. If you are used to mechanical tasks and love tinkering, we offer you to purchase Part-Number 56395, which includes a new replacement switch and padding. If you don't feel mechanical, we recommend you spend the extra money and buy a Part-Number 60017-001, which includes the lid of the upper body of the float, a switch already installed in the lid of the case, a pad, an attached cord and a guard switch and hand assembly. If you are willing to try new technology, are tired of removing the pump from the pit to replace the switch, and have a low level of mechanical confidence, we recommend HC6000 or HC8000. Learn more about the HC6000 and HC8000 electronic switchboard. 1. Turn off the sump pump from the socket and remove it from the pit. 2. Relax the control valve so the discharge pipe attached to the pump can be turned off. Get ready from the water dripping. 3. Allow the metal top of the switch to swing freely from the pump. 4. Remove the float switch top unscrew the top screws with the driver's screw. 5. Move the float switch from the top of the body pump. 6. Slowly turn off 2 black connectors; then disable the green connector, which is a ground connector. Don't forget to make black connectors first. 7. When no more wires are connected take the float top and it's next to the pump. 8. Take a new float on top and place it on the pump, connecting the green wire first to the point marked GRD. Click on connector all the way down. 9. Take 2 black connectors and plug them by pushing them all the way down. Guide the float from top to bottom closer to the pump as the black connects are made tightly safe. 10. When you guide the float from above to place at the top of the pump, line the holes where the screws are refastened. 11. The hand tighten the screws in place making sure that the upper and lower part are aligned. Then make a 1/4 quarter turn, more tighten. Tightness keeps moisture from the pump. 12. Reattach the top metal thread of the switch on the hand and provide a rubber loop back at the base of the pump. 13. Return the sump pump to the pit. 14. Connect the pump power cord to the socket. 15. Check the pump by adding water to the pit, which will cause the float to activate the pump. 16. If it works properly you are done. Watching someone perform a replacement float switch is an easy way to gain confidence and know how so that you will be able to replace your own switch. Learn how to replace the Wayne Top Float switch. Float Kit for Smooth Sump Pumps Replacement Float Kit Part-Number 60038-001 for CDU, SPF model includes float, genus and rubber loop. Float Switch Kit for Pedestal Sump Pump Replacement Switch Part-Number 56396 for Pedestal Sump Pump SPV500s. Impeller for submersible Replacement Impeller Part-Room 60031-WYN1 and 23128 for CDU, SPT, SPF, SSPF, SSPT models. Impeller for Pedestal Replacement Part-number 56392 for pedestal SPV model. Wayne's engines and housing will last longer than the switch. Refusing to live with an engine is not environmentally friendly. In addition, the parts are easy to install and cost much less than buying a new one. Do you need more information about Wayne Sump pumps?
